

Market segment: Industry

2N[®] Helios IP Force

Security for your entrance

SUITABLE FOR:

- FACTORIES/PLANTS
- PRODUCTION HALLS
- FREIGHT DEPOTS
- PHYSICAL SECURITY

BENEFITS:

- RESISTANT TO EXTERNAL INFLUENCES
- ROBUST DESIGN
- VIDEO MONITORING ENTRANCES
- ACCESS CONTROL

2N® Helios IP Force

Security for your entrance

Concept: Intercom

External door intercoms must meet many expectations. Their primary function is to control access to the building or office and connect visitors with people inside, in a manner that is comfortable for both sides. They must be resistant to changing weather conditions, be fully functional under all circumstances and easy to operate. For us, as a manufacturer, fulfilling these legitimate requirements was a major challenge.

Intercom design maximally conforms to its function, yet it must be elegant and not damage the company's image. Resistance to the environment is a necessity, but this must not restrict user comfort or the clarity of communication.

Intercom functions are determined by network connection and configuration. IP devices using standard SIP have a clear advantage, enabling duplex voice and video transmission, redirecting calls and interoperability with other, even remote systems.

Intercom management is an essential activity and its overall difficulty determines work efficiency at the company. It is therefore important for the intercom to have a clearly structured, intuitive interface that enables the configuration of all parameters. With the 2N® Helios IP Force, the system administrator has two options – a web interface for the specific intercom or the 2N® Helios IP Manager, an application for the management of a number of intercoms from one location.

Solutions:

Entry to a building

The 2N® Helios IP Force with a keypad, camera or card reader installed in the wall by the entrance – is a typical solution for the entrance to plants. Employees and visitors are sure to appreciate the elegant design and functions. Direct dial buttons will connect visitors with the concrete workplace. If the given person is absent, the visitor will be connected to the mobile phone of the competent employee. The other party can then easily open the door from an IP phone or mobile. The visitor's identity can also be verified visually using a video-telephone or the PC HIP Eye application. Employees can simply open the door using a card or numerical code.

Entry to warehouse facilities

Areas where goods are unloaded at night or entry to protected areas are places that need to be under control. The benefits of video, the option of identification using an external fingerprint reader and secure connection are intercom features that reinforce security on your premises and save employees time and company costs. Resistance to mechanical damage and up to IP69 coverage ensure operation under all circumstances.

2N TELEKOMUNIKACE

We are an international company based in the Czech Republic specializing in the development, manufacture and sale of IP intercoms. We have been active on the market since 1991 and we currently have 150 employees. We are proud of our high quality and reliable product portfolio. Our intercoms are the most technologically advanced products on the market, which is confirmed by important certification from Cisco or Avaya.

Thanks to our development and manufacturing facilities and years of experience, we can flexibly respond to the needs of the market and individual customers. We can meet the requirements of the most demanding clients, who we offer tailor-made solutions to meet their exact needs.

We are continually expanding our operation and currently do business with partners in more than 125 countries. You will find our branches all over the world.
