2N® Helios IP Uni

An affordable door intercom

Concept: Intercom

The basic function of a door intercom is to ensure reliable communication between the building user and people who wish to enter at the entrance door. For this reason, it is essential for it to be clearly visible and easy to operate for all visitors. It should also be easy to install, it should be functional under all circumstances and it must be of an appropriate design. In short, it should be a reliable device with pleasant user properties.

The design of the intercom is subordinate to its function, but let's not forget it also represents you at the entrance door. Resilience to environmental influences is essential, but it must not limit user comfort and the comprehensibility of communication.

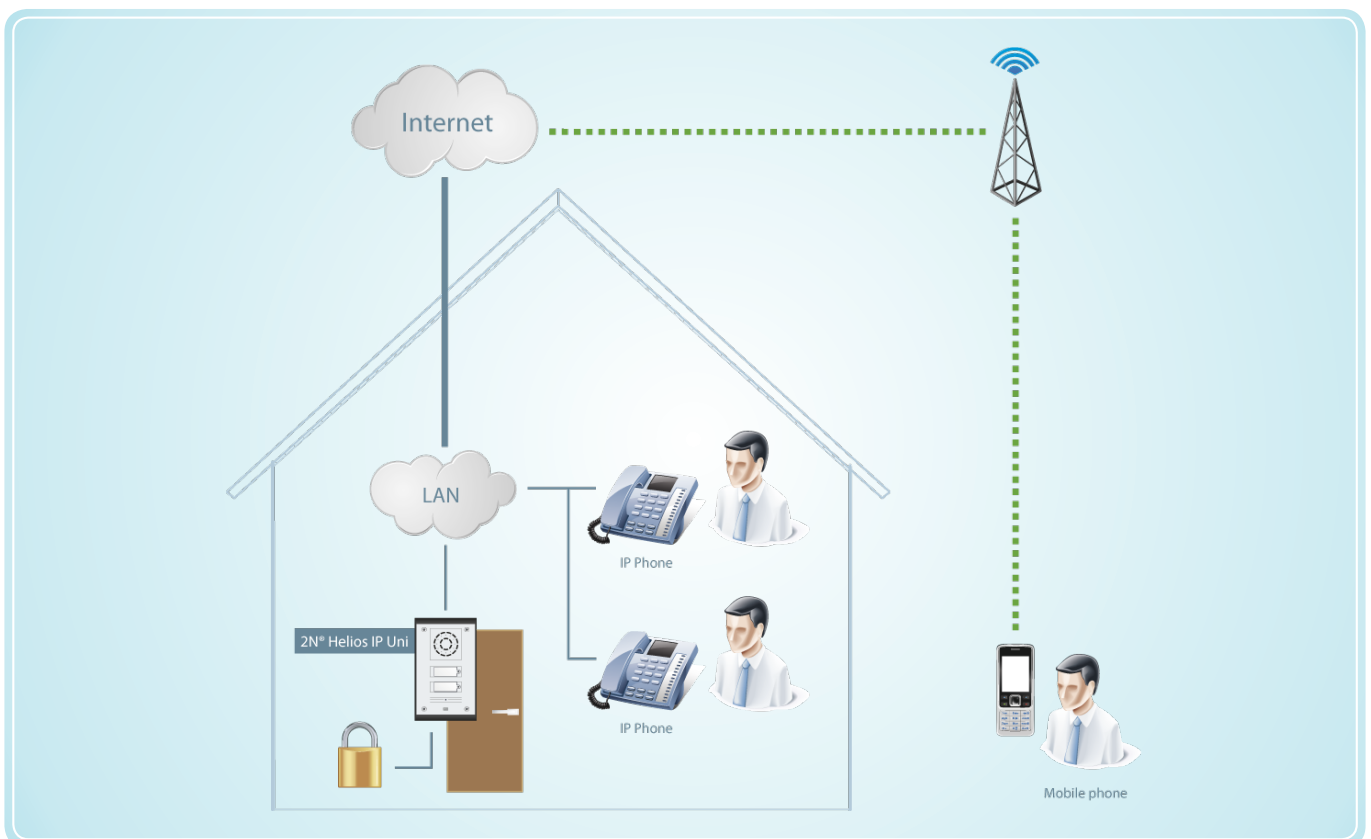

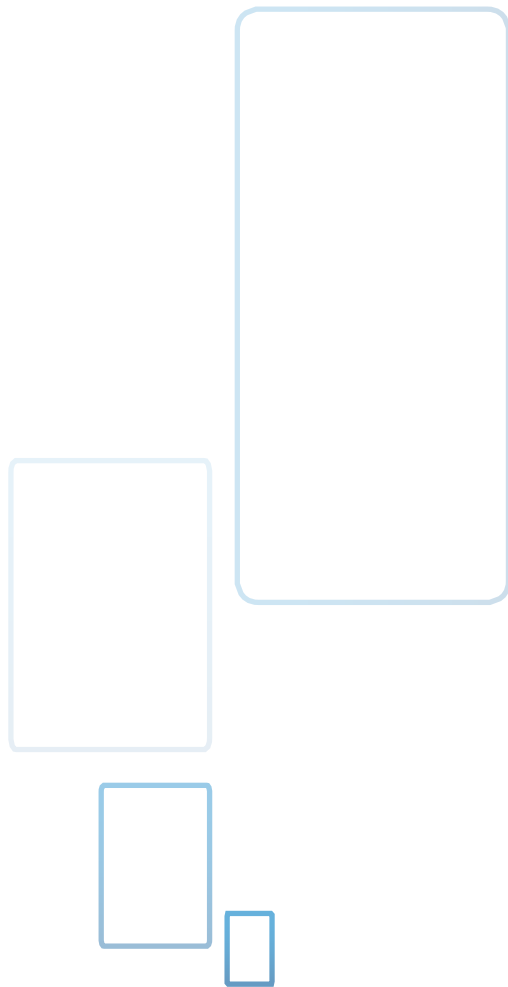

The functionality of the intercom is given by the manner of its network connection and configuration. IP equipment functioning on the SIP standard, which allows duplex voice transmission, rerouting calls and interoperability with other, even remote systems, holds an undoubted advantage.

Intercom management is an unavoidable activity whose overall demands determine work efficiency. For this reason, it is important for an intercom to have a clearly structured intuitive interface allowing the configuration of all parameters. In the case of the 2N® Helios IP Uni, the system administrator has two possibilities, he/she can either use – the web interface of the concrete intercom, or the 2N® Helios IP Manager, software for the simple management of a large number of intercoms.

Solutions:

School caretaker's flat

Even a state institution can have entrances where it is not necessary to install a sophisticated solution, for example with video supervision or access system. On the other hand, if you appreciate affordability, simple installation and easy operation, the 2N® Helios IP Uni is the ideal solution. The single-button version with one user retains the functions for subsequent integration and easy configuration via a web interface. If the operator is absent, visitors can call up to three pre-selected telephone numbers, which both sides will certainly appreciate. Even at a low purchase price, the IP intercom retains the high design standard of the 2N product range.

2N TELEKOMUNIKACE

We are an international company based in the Czech Republic specializing in the development, manufacture and sale of IP intercoms. We have been active on the market since 1991 and we currently have 150 employees. We are proud of our high quality and reliable product portfolio. Our intercoms are the most technologically advanced products on the market, which is confirmed by important certification from Cisco or Avaya.
