

Market segment: Business

2N[®] SIP Speaker

Much more than just a PA system

SUITABLE FOR:

- OFFICE BUILDINGS
- SHOPPING CENTERS
- HOTELS
- BANKS
- RETAIL OUTLETS

BENEFITS:

- THE PA SYSTEM IS CONNECTED TO THE TELEPHONE SYSTEM
- ANNOUNCEMENTS CAN BE EASILY MADE TO SPECIFIC ROOMS AND ZONES
- ABILITY TO MAKE ANNOUNCEMENTS FROM AN ORDINARY TELEPHONE

2N[®] SIP Speaker

Much more than just a PA system

Term: PA system

These days, a PA system features in every office building. Even in the era of mobile telephones and e-mail correspondence, a situation may arise that requires the ability to make a public announcement. And not just in emergency situations, such as the immediate evacuation of a building, but also, for instance, to provide information to employees or visitors.

Traditional solutions consist of a large exchange with an output amplifier, from which analogue cabling runs throughout the entire building. In order to make an announcement, the user must go to the specific room housing the exchange. It is precisely these disadvantages that are resolved by our 2N[®] SIP Speaker a device for making public announcements using VoIP technology. Terminal equipment is connected to the system in the same way as IP telephones, and just as easily as creating a conference call, you can call a pre-defined group of local phones from any landline, mobile or other IP telephone anywhere in the building or even outside. Phones only have to be configured once, connected to the telephone exchange, and public announcements become an easily usable tool for internal company communication.

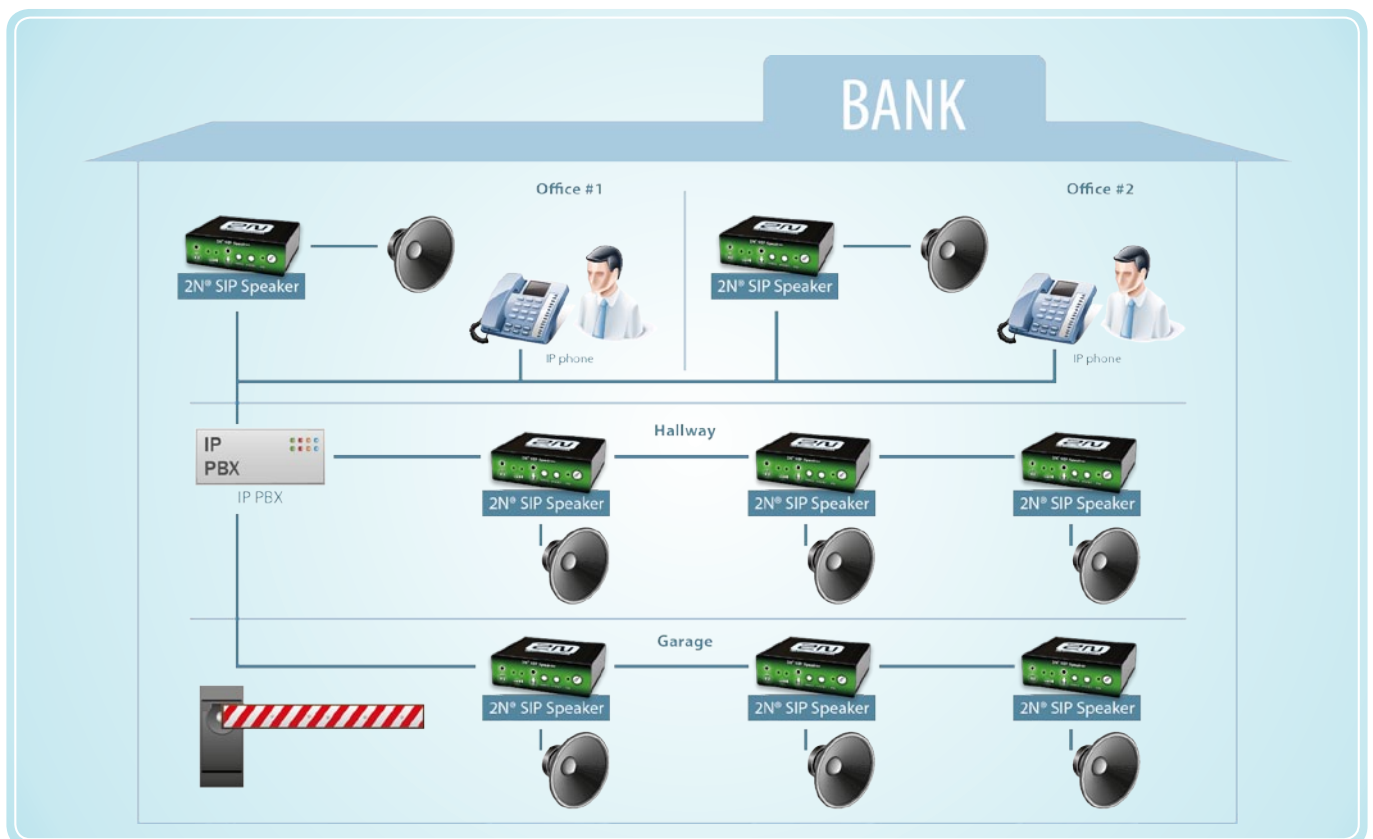

Solution:

Sound system installation in offices and corridors

For a typical office building with a central IP telephone system, a PA system using VoIP technology is an ideal solution. Depending on authorisation and work position, individual users have the ability to make announcements within their own leased premises and corridors, or throughout the whole building.

Key advantages of the 2N® SIP Speaker:

- Connection to the telephone system allows announcements to be made without the need for a central broadcasting station.
- User rights can be easily configured at the exchange, and the 2N® SIP Speaker is compatible with exchanges manufactured by global brands.
- The investor saves on cabling, because VoIP uses the same infrastructure as the computer network.
- If an analogue exchange has already been installed, the 2N® SIP Speaker can also be connected to it. Simply connect the line output to the exchange input and you can make announcements from an IP telephone to an analogue PA system. In this case, the 2N® SIP Speaker logical relay output can also be applied, which enables the exchange to be simply switched on and off.
- The 2N® SIP Speaker is available as a compact package with a built-in speaker. Simply connect the cable and start making announcements.

2N TELEKOMUNIKACE

We are an international company based in the Czech Republic specializing in the development, manufacture and sale of IP intercoms. We have been active on the market since 1991 and we currently have 150 employees. We are proud of our high quality and reliable product portfolio. Our intercoms are the most technologically advanced products on the market, which is confirmed by important certification from Cisco or Avaya.

Thanks to our development and manufacturing facilities and years of experience, we can flexibly respond to the needs of the market and individual customers. We can meet the requirements of the most demanding clients, who we offer tailor-made solutions to meet their exact needs.

We are continually expanding our operation and currently do business with partners in more than 125 countries. You will find our branches all over the world.
